Code under Review: Commit #0ccd29ced392088e78ffe7b8b9ff7b7058d51781

ZoteroExt.js – selectToggle (lines 194 – 230)

Author: Junaid

Issues Found:

Bug in selecting items and switching tabs

Steps to Reproduce:

1. Open Batch Editing and go to Merge Tags
2. Search for something such that you will find some items, but not all of them
3. Click Select All
4. Switch to Remove Tags
5. Click Select All

Expected Result: All items should be selected

Actual Result: Only the items that were previously searched for will appear and only those will be selected

Location of bug:

Line 214 – Calls searchTag, but if the list was not reset from the last search then searchTag will return the previously searched elements.

Suggestions:

Reload the tags and reset the search whenever the user switches tabs by calling loadTags()
